Critically Different Change on Vulnerable on One or More Scales from Wave 4 to Wave 5

Critical difference is a method that we use to determine whether a change in EDI vulnerability rates from one period to another (shown on this map), or between two neighbourhoods reflects a statistically significant, real, change in vulnerability, rather than a more minor change associated with measurement variations.

Change in EDI vulnerability rates from Wave 4 to Wave 5

-  Critically Different Decrease in Vulnerability
-  Critically Different Increase in Vulnerability
